GVW	6,000 lbs.	6,000 lbs.

Summary of Utility Trailer Types

Small Utility Trailers

These are single axle trailers with big trailer features. They are designed for the homeowner who wants a commercial grade trailer in a small package. All of our small trailers include the same features and benefits of our larger trailers, as standard equipment. From tie downs to radial tires, quick lube axles to shrink tube wiring connections, there is no sacrifice with a small utility trailer from Integrity.

Car Hauler

These trailers are classic in design but with many of the features and benefits of other Integrity trailers. From hidden, stow-away ramps, to our paint matching system, these trailers will satisfy the most discriminating customer.

Standard Frame Landscape

These trailers are designed for the individual who has lighter equipment that is larger in size. For example, motorcycles, zero-turn mowers or four wheeled ATVs. These trailers offer many of the same features of our larger trailers, but in a lighter package.

HD Commercial Landscape

Our most popular line of trailers. They are designed for commercial landscapers and heavy equipment users. These trailers can be built for multiple applications, with GVW ratings up to 24,000 lbs. Because the trailer deck is between the tires, the maximum deck width is 84".

HD Deckover Landscape

Due to their unique 'deckover' design, these trailers offer the added benefit of deck widths up to 102". They're perfect for wide equipment, such as golf course fairway mowers, or tractors with wide implements. GVW ratings are available up to 24,000 lbs.

HD Tractor/Skid Steer

This open trailer is perfect for those hauling tractors, implements, and skid steers. Designed specifically for the grueling environments where the equipment is needed, these trailers have a low profile for easy loading, and full oak hardwood decking for long term durability. GVW ratings range from 9,900 lbs to 24,000 lbs.

Equipment Hauler

These heavy-duty trailers are designed for easier and safer loading of low profile equipment such as "Scissor" or "Man-Lifts." They are low to the ground with drop axles and knife blade ramps. Because the weight of the equipment is concentrated on small wheels, we build the trailers with heavy-duty, oak decking and additional frame supports. Finally, we install heavy-duty D-Ring tie downs to secure the equipment. Our standard size for this style trailer is 6' x 12'. Larger custom sizes are also available. GVW ratings are available up to 24,000 lbs.
